Sample Problem

Suppose in a Kuta Software worksheet, a triangle ABC has a line segment DE parallel to side BC, dividing the triangle into two smaller similar triangles, ADE and ABC. Given:

- AB = 8 units
- AC = 12 units
- AD = 4 units
- Find the length of AE.

Step-by-Step Solution

- Identify similar triangles: Since DE is parallel to BC, triangles ADE and ABC are similar by AA criterion.

- Set up proportions:

$$\left(\frac{AD}{AB} = \frac{AE}{AC} \right)$$

- Plug in known values:

$$\left(\frac{4}{8} = \frac{AE}{12} \right)$$

- Solve for AE:

- $\left(\frac{1}{2} = \frac{AE}{12} \right)$
- $\left(AE = 12 \times \frac{1}{2} = 6 \right)$

Understanding Kuta Software Infinite Geometry Similar Solids Answers

In the realm of high school and early college geometry, understanding three-dimensional figures and their properties is essential. Kuta Software, a renowned provider of educational software and worksheets, offers a variety of resources designed to help students grasp complex geometric concepts. Among these resources, the "Infinite Geometry" series stands out for its comprehensive practice problems, especially those involving similar solids. When students seek "Kuta Software Infinite Geometry similar solids answers," they are often looking for detailed solutions to deepen their understanding of similarity, scale factors, and surface area and volume calculations of three-dimensional shapes.

This article aims to provide an in-depth explanation of similar solids, how to approach problems involving them, and how Kuta Software's solutions can assist learners in mastering these concepts. Whether you're a student preparing for exams or a teacher seeking resource solutions, understanding the principles behind similar solids is crucial for success in geometry.

What Are Similar Solids?

Definition of Similar Solids

Similar solids are three-dimensional figures that have the same shape but not necessarily the same size. They are proportional in every dimension, meaning corresponding lengths, widths, and heights are scaled by a common ratio. This concept extends from similar triangles into the realm of three dimensions, involving shapes such as cubes, prisms, pyramids, cylinders, cones, and spheres.

Two solids are similar if:

- Their corresponding angles are equal.
- The lengths of corresponding sides are proportional, with a common scale factor.

Examples of Similar Solids

- Two rectangular prisms with the same shape but different sizes.
- Two cylinders with the same proportions but different heights and radii.
- Two pyramids that are scaled versions of each other.

Key Properties of Similar Solids

Scale Factor

The scale factor between two similar solids is the ratio of any pair of corresponding linear measurements (such as lengths, widths, or heights). For example, if the height of one solid is 10 cm and the corresponding height of the similar solid is 15 cm, the scale factor is $15/10 = 3/2$.

Surface Area and Volume Ratios

The ratios of surface areas and volumes of similar solids follow specific rules:

- **Surface Area Ratio:** The ratio of the surface areas is the square of the scale factor.
- **Volume Ratio:** The ratio of the volumes is the cube of the scale factor.

For example, if the scale factor for the linear dimensions is 2, then:

- Surface area ratio = $2^2 = 4$
- Volume ratio = $2^3 = 8$

Approaching Kuta Software Infinite Geometry Similar Solids

 - Verify by plugging the solution back into the ratios.

Sample Problem and Solution

Problem:

Two similar cylinders have heights of 12 cm and 18 cm. The surface area of the smaller cylinder is 192 cm². Find the surface area of the larger cylinder.

Solution Steps:

- Identify knowns:

- Smaller cylinder height, $(h_1 = 12\text{ cm})$
- Larger cylinder height, $(h_2 = 18\text{ cm})$
- Smaller surface area, $(SA_1 = 192\text{ cm}^2)$

- Find the scale factor for linear dimensions:

[

$$\text{Scale factor} = \frac{h_2}{h_1} = \frac{18}{12} = 1.5$$

]

- Determine the surface area ratio:

[

$$\frac{SA_2}{SA_1} = (\text{Scale factor})^2 = (1.5)^2 = 2.25$$

]

- Calculate the larger surface area:

[

$$SA_2 = SA_1 \times 2.25 = 192 \times 2.25 = 432\text{ cm}^2$$

]

Answer: The surface area of the larger cylinder is 432 cm^2 .
